

Anton

The autonomous agent that thinks, acts, and learns

Open Source • github.com/mindsdb/anton • mindsdb.ai

We built dashboards.

We built SQL editors.

We built BI tools.

And yet — the real challenge is getting the right answer in time.

The problem hasn't changed.

Every time someone outside the data team needs an answer, they file a ticket.

Every dashboard shows the *what* — never the *why*.

Every insight arrives too late to matter.

The problem was never the data. It was always the gap between the question and the answer.

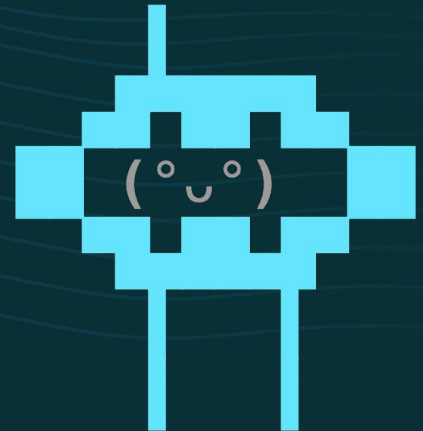

What if you could just... ask?

An analyst that reads your data, writes the code, runs it, and explains what it found.

Meet Anton

An open source, autonomous agent

Anton finds the answer.

Anton **plans**, writes **real code**, executes it,
and hands you back an answer —
with every step visible.

A coworker with a computer.

How it works

Every step is auditable. Every query, every line of code, every result — visible.

• • • scratchpad

You:

"Which customers churned last quarter?"

Anton:

Querying your database and running the analysis...

The Scratchpad

Anton's execution environment.

Like a notebook, but Anton controls it.

- Writes and runs real SQL and Python
- State persists across steps; context carries forward
- Every line of code is visible; nothing hidden
- Can spawn sub-analyses for complex problems

Not generated text— real code, real output, real data.

```
• scratchpad [executing]

import pandas as pd

import matplotlib.pyplot as plt

# Query churn data
df = query_minds_data(
    "SELECT customer_id,
       plan, churned_at
    FROM customers"
)

# Analyze by plan type
churn = df.groupby('plan')[
    'churned_at'].count()
```

Anton remembers — and gets smarter every session.

Your rules

"Always exclude test accounts from churn calculations"

Your definitions

"Active User = 2 or more logins per week"

Past sessions

Follow-up questions build on prior work — no starting from zero each time

Lessons learned

After every session Anton replays what happened and extracts what it learned

Every session makes the next one faster.

If you get stuck or need an API key, just reach out.

The question your data has
always been able to answer.

You just never had anyone to ask it for you.

Until now.

Demo

Anton

Open source. Autonomous. Yours.
